Fig. 48. Accumulation of SPD in MDA cells after 20 h in the presence of ORI 1202.

³H-SPD (1 ^µM) and ORI 1202 (0-100 ^µM) were incubated with MDA cells for 20 h.

Cells were washed, lysed, and cpm determined. Values represent the mean of triplicate wells.

Bars, SD.

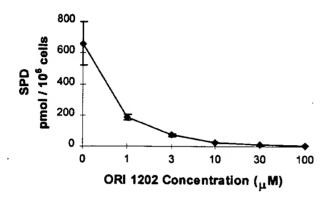

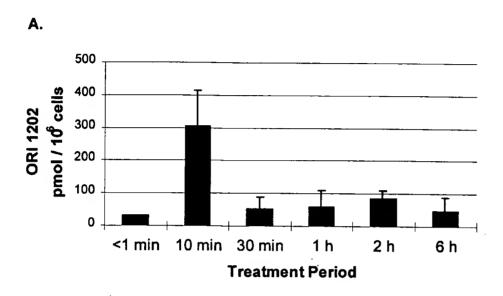

Fig. 49. ORI 1202 and polyamine accumulation in MDA cells over 6 h.
 MDA cells were incubated with 30 μM ORI 1202 and 1 mM AG for up to 6 h.
 Dansylated ORI 1202 (A) and PUT, SPD, SPM (B) were quantified by HPLC. Values are mean of triplicate samples and are representative of two experiments. Bars, SD.

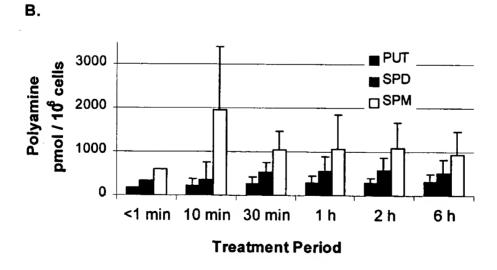

Fig. 50. Recovery of SPD transport in MDA cells after 1 h treatment with ORI 1202.

MDA cells were incubated with 230 $^{\mu}$ M DFMO for 3 days then treated for 1 h with 100 $^{\mu}$ M ORI 1202, 1 mM AG, 230 $^{\mu}$ M DFMO. After washing and continued incubation with DFMO for various times, transport of 3 H-SPD was assayed. Wells of identically treated cells were counted. Values represent triplicate wells and are representative of 3 experiments. Control, cells treated with DFMO for 3 days; ORI 1202, cells treated with DFMO for 3 days and ORI 1202 present during the transport assay; Bars, SD.

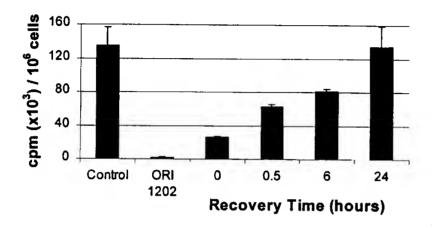

Fig. 51. Growth inhibition and rescue of MDA cells treated with DFMO +/- SPD.

MDA cells were grown with varying concentrations of DFMO +/- 1 \(^{\mu}\)M SPD for 6 days.

Cell number was determined by MTS/PMS assay on triplicate wells. Bars, SD

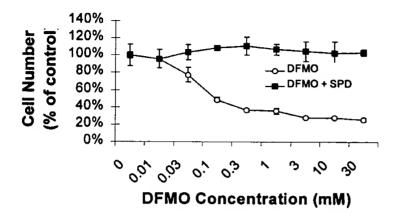

Fig. 52. Polyamines rescue MDA cells from DFMO-induced growth inhibition.

MDA cells were incubated with 230 $^{\mu}$ M DFMO, 1 mM AG and varying concentrations of polyamines or ORI 1202 during a 6 day growth assay. Cell number was determined by MTS/PMS assay.

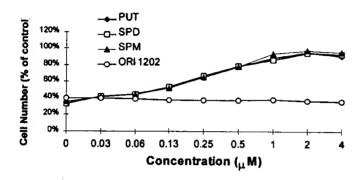

Fig. 53. Growth inhibition of MDA cells with ORI 1202 and DFMO.

MDA cells were incubated with 1 $^{\mu}$ M SPD, 1 mM AG, 0.1-100 $^{\mu}$ M ORI 1202 +/- 230 $^{\mu}$ M DFMO during a 6 day growth assay. There was no growth inhibition with 230 $^{\mu}$ M DFMO and 1 $^{\mu}$ M SPD. Cell number was determined by MTS/PMS assay from triplicate wells. Bars, SD.

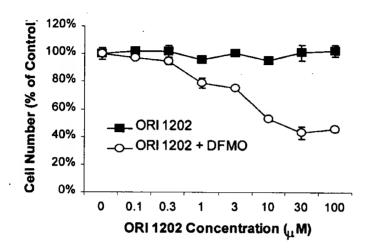

Fig. 54. Polyamines rescue MDA cells from growth inhibition due to ORI 1202 + DFMO. MDA cells were incubated with 1 mM AG, 30 $^{\mu}$ M ORI 1202, 230 $^{\mu}$ M DFMO and 0.1-300 $^{\mu}$ M polyamine during a 6 day growth assay. Cell number was determined by MTS/PMS assay from triplicate wells. Values represent the mean of two experiments.

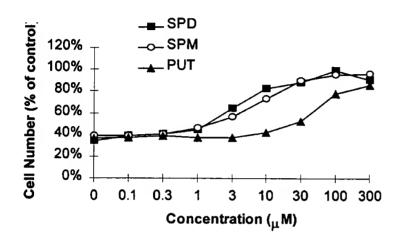

Fig. 55. MDA cell growth over 3 weeks with ORI 1202, DFMO, or both.

MDA cells were grown for 6 days (week 1) or 7 days (week 2 and 3) with 500 $^{\mu}M$ DFMO, 60 $^{\mu}M$ ORI 1202, or both, plus 1 mM AG and 1 $^{\mu}M$ SPD. Cell number was determined by counting after trypsinization. Each point is the mean of 3 or more experiments. Bars, SD.

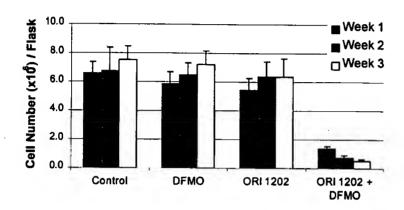

Fig. 56. Polyamine levels in MDA cells after 1 and 3 weeks with ORI 1202, DFMO, or both.

MDA cells were grown for 6 days (week 1) or 20 days (week 3) with 500 μ M DFMO, 60 μ M ORI 1202, or both. All flasks received 1 mM AG and 1 μ M SPD. Cells were counted, washed, lysed in perchloric acid, dansylated and polyamine levels determined by HPLC. Each point is the mean of 3 experiments. Bars, SD.

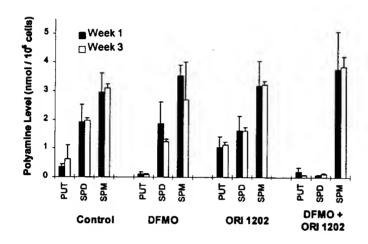

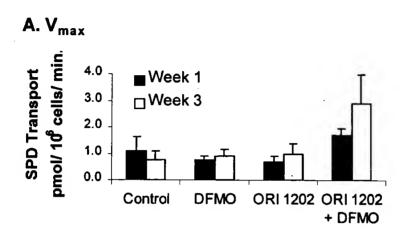

Fig. 57. SPD transport characteristics in MDA cells after 1 and 3 weeks with ORI 1202, DFMO, or both.

MDA cells were grown for 6 days (week 1) or 20 days (week 3) in flasks, then an additional 4 days in 24-well plates with 500 $^{\mu}$ M DFMO, 60 $^{\mu}$ M ORI 1202, or both. All cultures received 1 mM AG and 1 $^{\mu}$ M SPD. (A) V_{max} of 3 H-SPD transport. (B) K_{m} of 3 H-SPD transport. Each point is the mean of 3 or more experiments. Bars, SD.

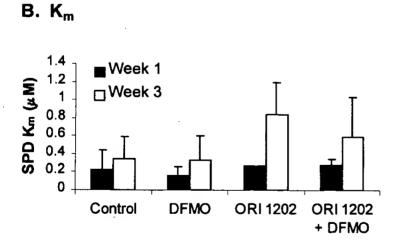

Fig. 58. Polyamine levels (pmol/ million cells) in MDA cells after exposure to ORI 1202 (30 ^µM)
